## 1st MTP Fusion and Hoffman Procedure

### Pre-op

64 yo male rheumatoid arthritis patient with long standing plantar foot pain, worsening hallux valgus deformity, and MTP subluxation 2-5 comes in complaining of walking on "stones." He has a remote history of IP #2 joint fusion. The patient states that shoe wear and walking has becoming extremely painful. He has tried inserts and orthotics without relief.

### Procedure

The patient underwent first MTP fusion using a Medium 30mm HalluX implant with a  $\varnothing$ 4.0 by 24mm Lag Screw. The MT 2 through 5 was resection (Hoffman procedure) and provisionally pinned.
