Extremity Medical Announces 510(k) Clearance for the Omni MTP Fusion System.

Extremity Medical, LLC announces it has received 510(k) clearance for the Omni MTP Fusion System. Omni is a comprehensive MTP fusion system which provides all traditionally used methods for fixation of the MTP joint for fusion. Unlike anything else currently available, the Omni System also provides the novel and patent pending PlantarFiX™ technology. PlantarFiX™ is a modular component of this system designed specifically to generate consistent plantar-side compression across the arthrodesis site regardless of patient bone quality. Initial cases with this highly innovative system are expected to take place in mid-November.

Matt Lyons, Chairman and CEO of Extremity Medical commented, "The Omni MTP Fusion System, along with the Axis Charcot Fixation System, and the BioFuse- Viable Bone Graft launches in 2017, demonstrates Extremity Medical's focus and dedication to continue to develop innovative products that will significantly impact the extremity surgeon's ability to treat challenging patient conditions. These innovative designs will do just that"

Currently, Extremity Medical has 17 products released globally which include specialized fixation and advanced arthroplasty systems for the distal lower and upper extremities.
