

Plate X Post X Screw = Exponential Impact

The results are clear: more consistent plantar-side compression, especially in challenging cases.

Omni Plating System

delivers game-changing fusion technology for internal fixation of arthrodesis, osteotomies, fracture repair and nonunions of the small bones of the foot.

The novel, integrated plate, post and screw interface of the Omni Plating System works in cases where traditional plates may not, because the system is designed for greater, more durable and more consistent plantar-side compression.

What makes the Omni Plating System different? The unique PlantarFiX™ Post and integrated lag screw that exponentially increase the performance of a dorsal plate in regard to plantar compression.

The PlantarFiX Post acts as a metal cortex for the lag screw and provides consistent and enhanced compression to eliminate the risk of plantar gaping. This greatly assists in the promotion of fusion for a wide range of indications—even for patients with poor bone quality.

All plates in the Omni system can be coupled with the unique PlantarFiX™ Post.

◀ 3.5 Lag Screw X PlantarFiX Post optimized compression.

Low  High

Unequaled plantar compression with an MTP plate solution now in 3 additional configurations.

Narrow Straight MTP Fusion Plate

Narrow 7.5° Dorsiflexed MTP Plate

Long, Revision MTP Plate

New Narrow Straight and Dorsiflexed Options

These narrow width plates provide a tighter bow radius and a better anatomic fit for patients with smaller anatomy.

Delivering the most compression and stability. Period.

Real change **starts** here™

Omni Plating System

The PlantarFiX™ Post — a state of the art technology for biomechanical leverage that produces a broader surface area of consistent compression across the arthrodesis — is compatible with the locking holes of all plates in the Omni system.

Tougher cases. Better outcomes.

Real change **starts** here™

360° axial PlantarFiX Post rotation and interdigitating lag screw delivers unmatched plantar compression and stability regardless of bone quality.
