AOFAS Scientific Conference, Quebec City, Canada
September 14 – 17, 2022

Superconstructs™ For Charcot Reconstruction

Axis Plate® Charcot Fixation System

FDA cleared Charcot Plantar Plates optimize mechanical strength and stability. Compression Post amplifies compression and stability—even in compromised bone.

Axis Beam® Charcot Fixation System

Optimized to provide 47x the fatigue strength of traditional beams. X-Clip anchors the beam to increase compression and stability

IO Fix® 2.0 Fusion Fixation

Unique Post and screw construct designed to deliver unmatched uniform compression, stability, and zero profile for mid-foot cases

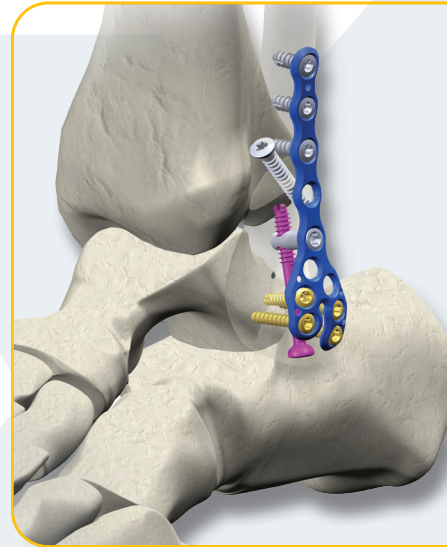

Omni Plating System

Plating System with unequalled plantar compression and stability

AlignX® Ankle Fusion System

Anterior and lateral TT and TTC ankle fusion system designed to maximize axial compression and stability

Omni™ Stable AF Ankle Fracture System

- Low Profile Plates designed to optimize anatomic fit
- Split design plate options for the medial tibia and lateral fibula
- L-shaped posterior tibial plate options optimize fit to the posterior malleolus
- Integrated Post Construct Option designed to optimize stability for patients with poor bone quality, and/or segmental bone loss

Next Generation Live Cell Bone Graft

BioFuse® Pro Osteo Viable Matrix

Advanced processing technology delivers healthier cells and improved handling characteristics for a complete bone formation solution, including challenging patient conditions.

Biomechanically engineered systems pioneered over the last decade by Extremity Medical offer significant and proven advantages over traditional plate and screw systems — especially for compromised bone:

- Amplification of compression
- Greater stability and strength
- Improve mechanical function
- Reduced surgical site trauma

Tougher cases. Better outcomes.
Real change *starts here*™

Extremity Medical has developed the most advanced
foot and ankle implant systems available – all built around the
patented game-changing X-Post technology that exponentially
increases the impact of companion plates and screws.

Tougher cases. Better outcomes.
